

Kloudbean

Managed Cloud Infrastructure, Hosting & Application Operations

Secure, scalable infrastructure for digital businesses, SaaS platforms, agencies, and business-critical applications.

Deploy

Secure

Optimize

Scale

Infrastructure that helps digital businesses operate with confidence.

Kloudbean is a managed cloud infrastructure and application operations company helping businesses deploy, secure, optimize, and scale digital products. We support production websites, SaaS applications, APIs, e-commerce stores, automation systems, AI tools, databases, and business-critical workloads through managed hosting, cloud engineering, DevOps, monitoring, backups, and responsive technical support. From simple deployments to custom, enterprise-grade infrastructure for mission-critical systems.

CORE CAPABILITIES

Managed Cloud Hosting

Application Operations

DevOps & Automation

Security & Reliability

Performance Optimization

Migration & Modernization

Global delivery. Headquartered in Connecticut, USA, with core operations and engineering support in India, and a globally distributed team delivering across time zones.

17,000+

Active users

60+

Countries

76+

Data centers

7

Cloud providers

One technical partner from deployment to day-to-day operations.

Managed Cloud Hosting

Production-ready cloud environments designed for performance, stability, security, and growth.

Application Deployment & Operations

Deployment and operational support for websites, SaaS products, APIs, dashboards, portals, and background services.

DevOps & Automation

Git-based workflows, CI/CD support, environment management, scheduled jobs, automation, and repeatable deployment processes.

Security & Reliability

SSL, access controls, hardening, patching, logging, monitoring, backups, and operational issue response.

Performance & Cost Optimization

Caching, server tuning, database optimization, CDN integration, resource monitoring, and infrastructure right-sizing.

Migration & Modernization

Planned migration of applications, websites, databases, and servers with testing, validation, cutover, and post-launch support.

Built for modern application workloads.

REFERENCE ARCHITECTURE

SUPPORTED TECHNOLOGIES

- Cloud & Linux infrastructure
- Custom cloud infrastructure implementations
- Node.js, PHP, Laravel, Python, .NET
- WordPress, Magento, Drupal
- Docker & containerized services
- MySQL / MariaDB, PostgreSQL, Redis
- Nginx and Apache web servers
- REST APIs, webhooks, cron jobs
- Background workers & socket services
- Git and deployment workflows
- n8n and automation environments
- Monitoring, alerting, backups, SSL
- Kubernetes & auto-scaling ENTERPRISE
- Private VPC, VPN & isolation ENTERPRISE
- SAP HANA on SUSE (SLES) ENTERPRISE
- ... and much more — this list is representative, not the limit of what we run

Every environment is designed around the application, operational risk, performance requirement, and growth stage. If it runs on Linux, we can host, deploy, secure, and operate it. **Not a one-size-fits-all hosting plan.**

Supporting the systems behind modern businesses.

WORKLOADS

- Production websites and WordPress platforms
- SaaS applications and customer dashboards
- API-driven products and webhooks
- E-commerce storefronts
- Database-backed products
- SAP, ERP, and mission-critical databases
- Automation and integration platforms
- AI tools and internal business systems
- Development, staging, UAT, and production environments

INDUSTRIES

- SaaS and technology
- Telecommunications and messaging
- Government and public digital services
- Finance, legal, and compliance-sensitive businesses
- Education and EdTech
- Healthcare and professional services
- E-commerce and consumer brands
- Marketing, creative, and web agencies

REGIONS SUPPORTED

Middle East

Europe

United Kingdom

Australia

Asia-Pacific

North America

Operational confidence without the complexity of managing everything yourself.

Engineering-Led Support

Application-aware troubleshooting across infrastructure, deployments, databases, logs, and integrations.

Built Around Your Application

Infrastructure decisions are based on workload needs, not generic hosting tiers.

Modern Stack Support

Support for websites, APIs, applications, containers, databases, automation, and AI workloads.

Security-Minded Operations

Attention to access control, SSL, patching, backup planning, monitoring, and operational visibility.

Global Client Delivery

Coordination across international time zones for global customers and distributed teams.

A Practical Growth Partner

Support from migration and launch through performance optimization, scaling, and ongoing operations.

Self-serve it yourself, or hand us the keys.

Not everyone needs hand-holding. The same platform runs a solo developer hosting one site and a government running mission-critical systems, so you choose exactly how much we do. Start fully self-service, and bring in our team whenever you want to.

SELF-SERVICE · STANDARD

Do it yourself, in minutes

Spin up production hosting from a clean dashboard, with no command line and no DevOps team. Launch servers, apps, and managed databases yourself, with free SSL, automated backups, and simple Git deploys built in. Ideal for developers, startups, agencies, and small sites.

MANAGED · PREMIUM

We manage it with you

Want a hand? Our team implements, monitors, and manages your infrastructure alongside your developers, working in your Slack or on WhatsApp, closer to an extended in-house ops team than a support queue.

FULLY MANAGED · ENTERPRISE

We run everything

A dedicated DevOps engineer and account manager, private networking, and custom infrastructure, a complete white-glove engagement for mission-critical and regulated systems.

Same platform, same reliability, whichever way you start. **Move up or down the spectrum as your needs change, without re-platforming.**

Run mission-critical systems with a team that operates as an extension of yours.

Dedicated DevOps & Account Team

A dedicated DevOps engineer and account manager run your environment with continuous, proactive monitoring and hands-on operational support.

Custom Cloud Infrastructure

Infrastructure architected to your performance, security, and topology needs: custom features, integrations, bespoke network design, and demanding stacks such as SAP HANA on SUSE Linux Enterprise Server.

Patching & Vulnerability Management

Ongoing OS and package patching, continuous vulnerability identification with prioritized fixes, and scheduled monthly and quarterly posture reports.

Private VPC, VPN & Dedicated Resources

A logically isolated private network with guaranteed dedicated compute, memory, and storage, reached through a fully configured, hardened VPN.

Kubernetes, Auto-Scaling & Zero-Downtime

Container orchestration, automatic scaling, and zero-downtime deployments for variable, high-demand workloads, tuned by our engineers.

Resilience Backed by an SLA

A 99.9% uptime SLA on Enterprise, automated backups and disaster recovery, unlimited business applications, and unlimited free migrations.

Prove your security posture, not just maintain it.

SIEM & SECURITY LOGGING · ADD-ON

Compliance-grade security monitoring

- Centralized event logging: authentication, privileged activity, host audit trails, IPS, package changes, and network/firewall
- File Integrity Monitoring across identity, SSH, PAM, scheduled tasks, boot, and system binaries
- Tamper-proof WORM retention for 18+ months, with retention lock, RBAC, and separation of duties
- Real-time alerting plus a compliance dashboard with exportable, audit-ready evidence

MISSION-CRITICAL MANAGED DATABASES · ADD-ON

For data where downtime is not an option

- Disaster recovery and point-in-time recovery, operated to your recovery objectives
- 256-bit AES encrypted, logically isolated backups, protected at rest and in transit, 35-day default retention
- Regularly rehearsed recovery drills that feed directly into your compliance evidence
- Strictly governed, securely managed access for regulated data in finance, healthcare, and transactional systems

What Kloudbean provides

- In-Kingdom residency on GCP Dammam (me-central2): servers, databases, backups and object storage pinned to your region
- Immutable audit trail, 18-month WORM retention with retention lock and CSV export
- AES-256 at rest, TLS 1.2+ in transit, customer-managed keys on request
- CIS hardening, monthly patching, quarterly vulnerability assessments, VPC and VPN-only admin access on Enterprise

What remains yours

- Application-layer controls: input validation, session logic, API security, OWASP
- Data classification and masking rules that depend on your business logic
- Governance: strategy, policies, risk register, staff awareness
- Commissioning penetration tests, and your PDPL duties as data controller

The honest boundary. Kloudbean is compliant-ready and aligned with these frameworks; we do not hold certification against them, and certification is assessed against your organization, not your hosting provider. We provide the infrastructure alignment, controls and audit evidence that let you demonstrate your technical controls, with an Enterprise team working alongside yours.

Built on official partnerships with the world's leading providers.

We run your workloads on tier-1 cloud infrastructure through direct partnerships, with no vendor lock-in, and layer in specialist security partners for defense in depth.

Selected organizations and businesses supported.

ONE PLATFORM FOR EVERY KIND OF TEAM

Governments

Enterprises

SaaS & Technology

Agencies

Startups

Developers

Trusted with government and public-sector workloads, including in the Kingdom of Saudi Arabia. Dedicated cloud projects, in-Kingdom residency and control-mapped evidence. Entities are not named, per our engagement confidentiality terms.

Cloud operations across varied business-critical workloads.

Messaging & Communications Platform

CHALLENGE

Supporting a multi-service communications environment with public websites, application services, APIs, admin systems, status tooling, and development environments.

KLOUDBEAN ROLE

Production hosting, environment support, deployment operations, performance troubleshooting, monitoring, and ongoing infrastructure management.

WORKLOAD

Public applications, APIs, background services, admin tools, staging and development systems.

Public-Sector Digital Services

CHALLENGE

Supporting reliability-focused digital service workloads with controlled environments, secure access, operational visibility, and structured support.

KLOUDBEAN ROLE

Infrastructure operations, deployment support, monitoring, backup planning, access controls, and incident troubleshooting.

OUTCOME

A managed operational foundation for public-facing digital services.

AI, Automation & SaaS Platform

CHALLENGE

Operating customer-facing apps, APIs, databases, automation workflows, internal tooling, and modern developer services.

KLOUDBEAN ROLE

Managed deployments, application operations, database support, automation infrastructure, backup planning, logs, monitoring, and scaling support.

OUTCOME

A repeatable and manageable foundation for continuous product delivery.

Operate with visibility, resilience, and a clear delivery process.

SECURITY & RELIABILITY

Secure Access and SSL

Controlled access, certificate management, secure credential handling, and environment hardening.

Monitoring and Observability

Availability checks, resource monitoring, alerting, logs, and operational visibility.

Backup and Recovery Planning

Scheduled backups, retention planning, restore procedures, and recovery readiness.

Controlled Releases

Staging environments, deployment checks, rollout support, and post-release monitoring.

ENGAGEMENT MODEL

01

Discovery

Review current environment, application stack, risks, integrations, and growth requirements.

02

Architecture

Define infrastructure, environments, monitoring, security, and backup approach.

03

Migration / Setup

Build, migrate, validate, test, and coordinate go-live.

04

Operate

Monitor, maintain, troubleshoot, support releases, and optimize.

05

Scale

Improve capacity, automation, performance, reliability, and security as needs evolve.

Thank you.

Kloudbean partners with founders, teams, agencies, and enterprises to deploy, secure, and scale the infrastructure their business runs on. We would be glad to help with yours.
